Hi

how I can pass variables to pdf then generate the file from blade page
after that Upload the file path in database??

thank you

Hy @almi9 You can [getOriginalContent](#) from http response to a variable. Then put contents to your file.

```
$content = $pdf->download()->getOriginalContent();
```

```
Storage::put('public/csv/name.pdf',$content) ;
```

Hi another option is to use the `output()` method before returning the `stream()` or `download` method

```
$pdf = PDF::loadView('pdf.invoice', $data);  
  
Storage::put('public/pdf/invoice.pdf', $pdf->output());  
  
return $pdf->download('invoice.pdf');
```
